Art Unit: 2838

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. Figure 7 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art in view of Farrar (6,275,396).

Applicant's admitted prior art disclose the claimed invention except for showing a plurality of groups of the unitary units. Farrar teaches the use of plurality of groups of

Art Unit: 2838

the unitary units in Fig. 2, where the inverter side in connected in parallel to the DC source and the rectifier side of the converter in connected in series. Applicant's admitted prior art Fig. 7 disclose a single group of the unitary units a DC –DC converter comprises a pair of conversion circuits parts (1, 2), two transformers (Tr1, Tr2) a pair of rectification circuit parts (3, 4) and an LC smoothing circuit part (5). The pair of conversion circuits (1, 2) have two pair of switching elements (Q1, Q4, Q2, Q3) AND Q5, Q8, Q6, Q7) which are connected by a full bridge configuration. It would have been obvious to one having ordinary skill in the art at the time of invention to provide a plurality of groups of the unitary units as taught by Farrar in Applicant's admitted prior art in order to provide high-linear power delivery for any configuration of loads.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kadatsky et al. disclose a method for clusterized power sharing conversion and regulation of the primary power source within a converting and regulating power supply and system. Nguyen et al. disclose a multiphase DC-Dc series resonant converter.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adolf Berhane whose telephone number is 571-272-2077. The examiner can normally be reached on Monday- Friday 8 AM to 6 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Sherry can be reached on 571-272-2084. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
